

Current Developments in Mathematics: Proceedings of Harvard/ MIT Seminar on the Current Developments in Math (1995—2001)

In 1995, the Current Development in Mathematics conference was founded. Since then, the same seminar has continued on the third weekend of November every year. The organizing committee for the seminar consists of distinguished mathematicians from the mathematics departments of both institutions. Current Developments in Mathematics reflects the wide range of interests of the Mathematicians of Harvard and MIT and their interactions with the others from all around the world. Each year, the invited speakers of the seminar open up discussions on current topics of interest with enduring significance, and inspire new research.

Special Promotion: \$250 for the complete set of CDM (8 issues; from 1995 to 2002.)

Current Developments in Mathematics 1995

Table of Contents

1. Fermat's Last Theorem, by *H. Darmon, F. Diamond, and R. Taylor*
2. Renormalization ideas in conformal dynamics by *M. Lyubich*
3. Algebraic K -theory and traces by *Ib Madsen*
4. The classification of conformal dynamical systems by *C.T. McMullen*

Editors: Raoul Bott, Michael Hopkins, Arthur Jaffe, Isadore Singer, Daniel Stroock and Shing-Tung Yau
 ISBN: 1-57146-029-2
 Year Published: 1996
 Binding: Hardcover
 Page: 282 pp
 Price: \$65, Sales: **\$39**

Current Developments in Mathematics 1996

Table of Contents

1. Automorphic forms and Lie Algebras - Richard Borcherds
2. Harmonic analysis for affine Hecke algebras - Gerrit Heckman and Eric Opdam
3. Stability and its uses - Ehud Hrushovski
4. Wavelets, Paraproducts, and Navier-Stokes Equations - Yves Meyer

Editors: Raoul Bott, Arthur Jaffe, David Jerison, George Lusztig, Isadore Singer and Shing-Tung Yau
 ISBN: 1-57146-035-7
 Year Published: 1997
 Binding: Hardcover
 Page: 212 pp
 Price: \$65, Sales: **\$39**

Current Developments in Mathematics 1997

Table of Contents

1. Trace formula in Noncommutative Geometry and the Zeros of the Riemann Zeta Function - A. Connes
2. Partial Differential Equations and Monge-Kantorovich Mass Transfer - L. C. Evans
3. Quantum Chaos, Symmetry and Zeta Functions - P. Sarnak
4. Character Formulas for Tilting Modules over Quantum Groups at Roots of One - W. Soergel
5. Is There Finite-Time Blow-Up in 3-D Euler Flow? - U. Frisch

Editors: Raoul Bott, Arthur Jaffe, David Jerison, George Lusztig, Isadore Singer and Shing-Tung Yau
 ISBN: 1-57146-078-0
 Year Published: 1998
 Binding: Hardcover
 Page: 136 pp
 Price: \$65, Sales: **\$39**
