

## Description

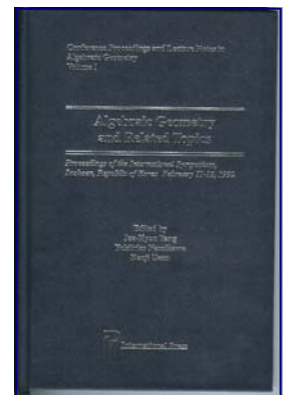

The International Symposium on Algebraic Geometry and Related Topics was held in Incheon, Korea. It was organized to stimulate and encourage Korean mathematics students to research more advanced areas of mathematics. This volume presents thought-provoking articles from some of the best mathematicians in the field. In this volume, the speakers give an expanded version of their talks, which serve as an introduction to various aspects of mathematics, as well as an essential tool for students interested in geometry.

Editors: J. H. Yang, Y. Namikawa and K. Ueno  
 ISBN: 1-57146-013-6  
 Year Published: 1994  
 Binding: Hardcover  
 Page: 197 pages  
 Price: reg. \$42, sales \$19

## Algebraic Geometry and Related Topics: Proceedings of International Symposium in Korea

## Table of Contents

1. Birational Classification of Algebraic Threefolds – S. Mori
2. Curves and Grassmannians – S. Mukai
3. The Teichmuller space and a certain modular function from a view point of group representation – K. Saito
4. Fixed Point Theorems and Representation Theory – W. Schmid
5. Geometric Superrigidity – Yum-Tong Siu
6. On the Geometry of Certain Superconformal Field Theory Paradigms – T. Hubsch and S.T. Yau
7. Birational Invariants of Modular Varieties and Singular Modular Forms – E. Freitag
8. Applications of Quasilinear PDE to Algebraic Geometry and Arithmetics Lattices – J. Jost and S. T. Yau

## Description

Many of the world's most distinguished scientists gathered to honor Professor and Nobel Laureate, Chen Ning Yang on the occasion of his seventieth birthday. This volume documents the scientific contributions that resulted from that conference. Additionally, it has several biographical and historical contributions that discuss the impact C.N. Yang has made on the research and lives of his students, colleagues, and friends.

Editors: C. S. Liu and S. T. Yau

 Binding: Hardcover  
 Price: reg. \$55, sales \$29

## Chen Ning Yang, A Great Physicist of the 20th Century

## Table of Contents

1. Development of Solvable Models - R. Baxter
2. C.N. Yang's Influence - G.E. Brown
3. Elements of Connes' Geometry - A.H. Chamseddine and J. Frohlich
4. Nonlinear Dynamics in Accelerator Physics - A. Chao
5. Yang's Pyramid - L. L. Chau
6. How to Quantize Yang-Mills Theory - H. Cheng
7. Conformal Gaussian Curvature on  $R^2$  - K.S. Cheng
8. Yang-Mills Equations - S.S. Chern
9. Professor C.N. Yang - T.T. Chou
10. Approaches to Discovery of Superconductors - B.S. Deaver, Jr.
11. C.N. Yang and CP Violation - J.W. Cronin
12. Quantized Flux in Superconductors - B.S. Deaver, Jr.
13. On Personal Style and Taste in Physics - M. Dresden
14. The Fifth Painleve Transcendent - F. J. Dyson
15. Gauge Theory - D.J. Gross
16. Remembering Princeton - K. Huang
17. Quantum group symmetry and lattice correlation functions - M. Jimbo
18. Encounters with C.N. Yang - C.K. Kao
19. Chen Ning Yang - Bing-An Li and Yuefan Deng
20. Beauty and truth - R. Mills
21. Twenty six years - H.T. Nieh
22. Einstein-Yang/Mills Black Hole Solutions - J.A. Smoller, A.G. Wasserman, and S.T. Yau
23. The Heisenberg-Ising model revisited - B. Sutherland
24. In honor of Professor C. N. Yang's 70th birthday - E. Teller
25. Recent results from electron-positron collisions at highest energies - Samuel C.C. Ting
26. Professor C.N. Yang's Crucial Role in the Development of a Great University - J.S. Toll
27. The Aharonov-Bohm effect and its applications to superconducting flux line observation - A. Tonomura
